What Part of the Plant Do We Eat?
Student Instructions
In this picture, there is a tomato, bell pepper, cucumber, and squash. Do you know what they have in common? They are fruits! Even though they are often called vegetables, they are not. So, what makes something a fruit or a vegetable? It has to do with where it grows on a plant.

What Part of the Plant Do We Eat?
Student Instructions
Plants are living things that make their own food. They use sunlight and water to make their food. Plant leaves are the flat green part. Leaves take in sunlight. Inside the leaf, sunlight is combined with air and water. This is how the plant makes food for itself.
Roots are the part of the plant under the soil. They hold the plant in the soil. They also take in water from the soil.

YOU WILL LOVE THIS BECAUSE

Hands-On and Visual Learning

Students stay active and focused while sorting real-world examples of edible plant parts with color cards or worksheets.

Aligned with NGSS

These lesson plans aren't just random; they're laser-focused on Next Generation Science Standards. No more curriculum guesswork!

Supports Differentiated Instruction

Multiple response formats (task cards, worksheets, and digital options) cater to different learning styles.

TEACHERS LOVE IT!

I used the edible parts of a plant sorting activity for K/1. The class found it very engaging.

Elisa L.

Easy to print off and use immediately. My class liked the different colored pictures. this worked well during science.

Jennifer Y.

My passion is making learning accessible to all students.
I love scaffolding learning, breaking down the concepts and building them up so that students can see the connections.
I love figuring out the small components that build up to the big ideas and helping students see it all.
